# G4LifeTime(G)

# 09/22/2012 Antoine LEMASSON NSCL

# **History for G4LifeTime**

#### • Starting point :

original Code from P. Adrich *et al.* (NIM A) (2009) *Geant4 /C++* 

#### • Since 2010 - Upgrade of the code :

- Cleaning up, removal of GUIROOT dependencies
- Rewriting of the output/storage and analysis
- More realistic Geometry : (Improvement on Caps, Dead layers, ...)
- Additional feature (Cascade decays, ...)
- Long term maintenance : Compatibility with upgraded version of G4 (4.9.4p4), Git Version control
- Documentation :
  Wiki + Doxygen + Simulation Database
- Lifetime measurement oriented (RDDS, Line-Shape, DSAM)
- S800 + SeGA (Plunger / Barrel ) experiments at NSCL
- To date : Version 0.4-RC2 (Sept. 2012)

A simulation tool for Recoil Distance Method lifetime measurements at NSCL

P. Adrich<sup>a</sup>, D. Enderich<sup>a</sup>, D. Miller<sup>a</sup>, V. Moeller<sup>a</sup>, R.P. Norris<sup>a</sup>, K. Starosta<sup>a,\*</sup>, C. Vaman<sup>a</sup>, P. Voss<sup>a</sup>, A. Dewald<sup>b</sup>

<sup>a</sup> National Superconducting Cyclotron Laboratory and Department of Physics and Astronomy, Michigan State University, 164 S. Shaw Lane, East Lansing, MI 48824-1321, USA <sup>b</sup> Institute for Nuclear Physics, University of Cologne, Zülpicher Str. 77, D-50937 Köln, Germany

# Main Features

- Incoming Beam / Outgoing Beam properties
- Basic reaction mechanisms modeling of Knock Out and fragmentation to reproduce \$800 measured outgoing momentum (phenomelogical)
- Basic S800 Acceptance cuts on : Momentum (dta) and scattering angle (ata, bta)
- Single target or Plunger (Energy losses)
- γ-ray decay in flight (also cascade decays)

### G4Lifetime event timeline

- Shoot Beam
- Track Beam (Energy Loss)
- Reaction
- Track Outgoing reaction product (Energy Loss)
- Decay In flight (Optional)
- Track Gamma rays
- Track Outgoing reaction product (Energy Loss)
- End of Event :
  - Analysis : Sorting events from Hits Collections
    - observables for outgoing ions to S800,
    - Gamma Rays :  $E_{\gamma}$ , interaction points, Segment energies (SEGA), Doppler Correction
  - ROOTRecorder to store in Tree/Histograms

Hits Tracking		
Analysis		
Root Recorder		

# Root Output

#### G4 Data Tree (List Mode)

- Positions (reaction, decay,  $\gamma$ -ray interaction points, ...)
- Ion Energy (Gun, E Loss in target and degraders)

### Relevant Histograms

- S800 :
  - ata, bta, dta, yta
- SeGA : γ-rays spectra
  - E gamma (lab)
  - E gamma Doppler Corrected (various options ... )
- Modular :

any body should be able to write its own output format (GEB centric ?)

### Practical examples (I)

### 2+ state lifetime <sup>76</sup>Sr :

- A.L. Phys Rev C, Rapid Com (2012).
  - $\gamma$ -ray peak line-shape method
  - $2^+$  state lifetime :  $T_{1/2} = 205$  (25) ps

# Practical examples (II)

**TRIPLEX campaign in Dec 2011** (**TRI**PLE <u>**PLUNGER**</u> for **EX**OTIC BEAMS)

Br exp : shape coexistence at N=Z
 Cr exp : collectivity at N=40

Online spectra compared with preliminary simulations

Simulations were made "" before the experiment ""

## G4LifeTime(G) v 0.4 (beta version)

- Including Gretina geometry description from Chris Campbell into G4LifeTime(G)
- Euler Angles input files for NSCL setup
- <u>/!</u> No comparison with "real" data so far !

<u>/!</u> Simplest Geometry into the existing Code, No surrounding materials

/!\ Position Resolution 3D Gaussian ! FWHM is input

<u>/!</u>\ no advanced feature for Add-Back,  $\gamma$ -ray tracking ...

NNSA-NSSC program (2011-2016) improve modeling of advanced γ-ray tracking array (Chris Morse, Kenneth Whitmore, H. Iwasaki, PD(?))

# Outlook

Some goals to improve/complete G4LifeTime(G) simulation :

- Improve the description of geometry for Gretina (position, and size of crystal, dead layer)
- Incorporating surrounding materials in the geometry (Sphere, Dewar, Pipe, Plunger, ...)

#### • Comparison with data:

- The highest priority of the group is to have spectral shapes which are good enough to be used for lifetime measurement and not much on absolute efficiency for now.
- Plunger data/lifetime from coming experiments (Oct 2012).
- Efficiency, Peak to Total for single crystal.
- Challenges : Understand the effect of Pulse Shape Analysis and Tracking
  - Peak-to-Total, Position resolution, efficiency.
  - and incorporate them in GEANT4 simulation ...
